TO OUR CUSTOMERS

We wish to thank our customers for the business given us during the past year. One year ago, we warned of a shortage in trees and to order early. It was with regret that we returned money in so many cases where items could not be furnished later in the season.

Once more we offer another word of warning. Probably the fruit tree shortage is more acute this year than last so that in all fairness to our trade, we urge that orders be placed early and the trees reserved until time for shipment. ORDER EARLY.

STATEMENT OF INSPECTION

Amherst, Mass

TO WHOM IT MAY CONCERN:

This is to state that I have examined all the saleable apple stock now growing in the nursery of Wallingford Nursery Company near Wallingford, Connecticut and as they now stand in the nursery row all varieties are, to the best of my knowledge and belief, true to name.

J. K. Shaw,

Research Professor of Pomology

NON-WARRANTY

We strive to avoid mistakes, but in the event that any nursery stock sold by us should prove untrue to the label under which it is sold, provided notice and proper proof are furnished to the seller, the seller shall, at the option of the buyer, either refill that portion of the order which was mislabeled, by another delivery of stock or refund the purchase price. But in any case the seller is not to be held responsible for a sum greater than the original selling price of such stock. All sales or agreements to sell are made subject to shortage of nursery stock from fire, frosts, drought, or other causes beyond control of the sellers.

APPLICATION OF PRICES

Customers may select 5 of any kind (such as 5 peach) at the 10 rate, 50 at the 100 rate, 500 at the 1000 rate.

DISCOUNT

5% discount may be deducted on all orders where the total amount is remitted with the order and this is sent before April 1st.

SIZE OF TREES

Caliper or diameter governs the size of all fruit trees except 1 year apple. Height is only approximate.

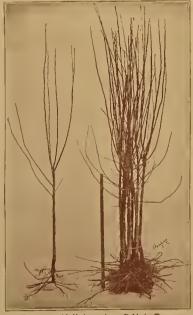

Spring Valley, New York, May 9, 1934

We now have about 1,500 trees bought from you since Spring 1925 in bearing, All true to name. So here is one satisfied customer.

Yours very truly, Beyor Brothers

STANDARD APPLE TREES ORDER EARLY

Permanent apple trees are usually planted about 40 feet apart. Some growers prefer more, some a little less. Some also use fillers, such as peach trees, or early bearing varieties of apples making them 20 feet apart or if planted only in the center of the 40 foot space the distance will be 28 feet. As the trees begin to crowd, taking out one half will leave them 28 feet apart and later when the remaining fillers are removed, the distance will be 40 feet. Thus an income can be had for many years, when the permanent trees will need only a portion of the land.

Two year old 18 in. and up Baldwin Trees.

For home planters who wish an unusually large tree, we offer seven year old, twice transplanted trees in the varieties designated. These two transplantings have made possible a wonderful root system so that the trees may be transplanted just as safely as small trees.

There is now a very acute shortage of fruit trees in the country, probably more so than has existed for the past forty years. Our opinion is that this shortage will not reach its peak for two years more. If it ever is necessary to order early, it is now. Don't delay.

PRICES

Exceptions: Doucin Dwarf Baldwin, Dwarf McIntosh, Dwarf Cortland to in. cal.

*Baldwin. Large red winter apple. Known by all. The heavy mortality in older orchards from the severe winter of 1934 most certainly will result in decreased production for years. In good Baldwin sections, why not plant

**Cortland. Very similar to McIntosh in flavor. Larger, darker red, ripens two weeks later, hangs to tree better, and well worth planting.

Red Strain Delicious. A so-called "Blood Red" strain of Delicious. It colors early and should by all means be planted in preference to common Delicious.

Delicious.

*†Duchess. Striped red. Early August. Following Red Astrachan.

Early McIntosh. A cross between McIntosh and Yellow Transparent.
Originated at Geneva Experiment Station, New York. The fruit is very similar to McIntosh in all respects, ripening after Yellow Transparent. Tree is a good thrifty grower and heavy producer.

*†Fall Pippin. Well known Fall variety.

Callia Banuty (Red Rome Beauty). Generally considered to be the

Gallia Beauty (Red Room Beauty). Generally considered to be the best red strain of Rome Beauty, an early and annual bearer of late winterapples which retain a bright, shiny appearance until spring.

*†Gravenstein. Large, striped, red. August and September.
Red Gravenstein. (Washington Strain) Originated in the State of Washington—said to be the very best strain of Red Gravenstein, similar to Gravenstein, but a much darker red.

Kendall. (Description by New York Fruit Testing Association, Geneva.

Kendall. (Description by New York Fruit Testing Association, Geneva, New York.)

"It is handsomely colored over the entire surface with dark red covered with a rich bloom. It has attracted more attention from fruit growers than any other new apple. Its season is about that of McIntosh, but it keeps a little longer. The apples are large, trim in outline, and possess the whitish, fine-grained flesh of McIntosh. The flavor is much the same but more sprightly than that of McIntosh. The apples hang better than McIntosh but not as well as Cortland. Kendall promises to be the "apple of apples" in the McIntosh season." For prices see above.

Macoun. (Description by New York Fruit Testing Association, Geneva, New York.)

"Its as Early McIntosh advances the season for the McIntosh type.

Geneva, New York.)

"Just as Early McIntosh advances the season for the McIntosh type of apple, Macoun produces a late crop of these red-skinned, white-fleshed, richly flavored, aromatic apples. The season of Macoun is from one to two months later than that of McIntosh with Cortland midway between. In shape, the fruits of Macoun are similar to those of McIntosh; the color is a darker red, less striped, and with a heavier bloom; the flesh is much the same in color, texture, flavor and aroma. The trees bear regularly and heavily *McIntosh. Known by everyone. Season of picking, last of September.

Melba. One of the newer varieties. Similer to Duchess in season and markings, but better quality and larger.

Milton. (Description by New York Fruit Testing Association, Genever.)

Milton. (Description by New York Fruit Testing Association. Geneva.

New York.)

"Milton is a sister of Early McIntosh which ripens its crop a month later. Its main value is that it is a McIntosh type which ripens before McIntosh. The tree is vigorous but not as large as that of Early McIntosh. The fruits are covered with a very pinkish red and heavy bloom. The flesh is white, tender, crisp, juicy, and of McIntosh flavor and aroma."

**Northern Spy. Well known early Winter, red variety.

Opalescent. Very large, red apple. Fall.

Red Astrachan. Best, early red apple. August 1st.

Red Rome Beauty. See Gallia Beauty.

Red Spy. A sport of Northern Spy. Similar in all respects to Northern Spy except in coloring in which it much surpasses its parent, having a solid red.

R. I. Greening. Fine dessert variety. Early Winter.
Rome Beauty. Late, red Winter apple. Very productive.
Roxbury Russet. Very late Winter russet apple.

*†Stayman Winesap. Standard Winter apple in New Jersey. A good variety for late Winter in some sections of New England. Large, red apple.

*†Wealthy. Fine filler variety. Often bearing fruit in the nursery at two years of age. Red. Late August.

*†Wagner. Great filler variety. Bears young. Red, early Winter.

*Williams Red. Summer apple. Following Duchess.

†Yellow Transparent. The first early apple of importance. Fine filler variety.

Hyslop Crab. Very productive. Red.

PEACH TREES

Due to exceptionally poor germination of peach seed in the spring of 1934, which rather peculiarily, was a general condition through out the United States, the quantity of peach trees available for the spring of 1936 is so small that the supply will be far below the demand. The trees are so far apart in the rows that they have grown to large sizes, making medium and small sizes practically nothing.

We shall spring dig our peach trees this year, and as far as the trees are concerned, expect to have No. 1 quality in all respects. As we are selling only peach trees of our own growing, no doubt we shall be unable to supply the demand, but if any are disappointed, and can delay until the spring of 1937, we expect to have an unusually good supply for that season.

PRICES

	Each	Ten	100
t in, cal, and up 5-7 ft. (Extra large grade)	\$.75	\$6,00	\$40.00

5 % in. cal. 31 5 ft.	.50	4.00	30.00

TIME OF RIPENING IS FOR CONNECTICUT CONDITIONS

Greensboro, August 1st. Medium size. White flesh, Very productive Mikado. (June Elberta) August 1st. A very handsome roundish variety.

Buttercup. August 3rd. Very similar to Mikado, but slightly larger Marigold. August 8th, Yellow, semi-free, ripening at a time which is desirable, filling a season where there has usually been a slight break. Oriole. August 10th. Nearly free, yellow and starts to ripen just ahead of Golden Jubilee.

Carman. August 15th. Medium to large. White. Very hardy variety.

Cumberland. August 15th. Practically free, white flesh, dark red coloring, clongated in shape, good size. Best white of its season.

Golden Jubilee. The most outstanding introduction of the New Jersey Experiment Station. A block laden with rich golden yellow, red blushed fruit is a handsome sight. Similar to Elberta in general appearance, but a brighter golden yellow, slightly smaller size and much better flavor.

Eclipse. August 25th. Medium size, yellow freestone, red cheek.

South Haven. August 25th. A very large yellow freestone of Michigan origin. Tree is thrifty and productive.

South Haven. August 25th. A Very large yellow freestone of Michigan origin. Tree is thrifty and productive.

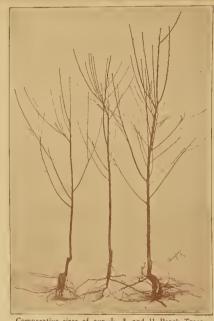

Belle of Georgia. September 1st. Probably the best known and most popular of white varieties.

Elberta. September 4th. Known to all. King of Peaches.

J. H. Hale. September 8th. Its extra large size, rich golden yellow color and handsome red cheek, fine flavor, and general attractiveness place it in a class by itself. For several years, Hale on our roadside stand have brought from 100 to 150% more than our best Elbertas.

Lizzie. September 20th. Best of its season. Similar to Elberta, being a chance seedling of that variety. Not quite as much red, but otherwise similar.

Peach Special No. 1. For those wishing a yellow freestone peach with handsome red coloring and shape of Elberta to follow immediately after Golden Jubilee. we offer Special No. 1. The original tree is a seedling standing in sod uncared for, but its production has been such that we have propagated from it, planted in our own orchards and have a few for sale. We have not attempted to introduce the variety nor to give it a name, so when ordering, please specify Peach Special No. 1.

Comparative sizes of our 70, 70 and 18 Peach Trees

I was very much pleased with the evergreens I purchased from you last year, and I am desirous of getting some again this year. Yours very truly, Ralph I. Wertman

OUR PATRONS WILL GREATLY OBLIGE US BY USING THIS
